PROFESSIONAL SUMMARY

MSc Computer Science graduate from Sapienza Università di Roma specializing in Machine Learning, Computer Vision, and Artificial Intelligence. Research experience in Continual Learning, Vision Transformers, CNN-based image analysis, and scientific experimentation. Published IEEE author with experience evaluating state-of-the-art research, designing machine learning experiments, and developing computer vision solutions. Proficient in Python, C++, PyTorch, TensorFlow, and OpenCV. Seeking Computer Vision, Applied AI Research, and Machine Learning Engineer roles.

EDUCATION

Sapienza Università di Roma **May 2026**

Master's in Computer Science

- **Relevant Coursework:** Computer Vision, Deep Learning and Applied AI, Natural Language Processing, Machine Learning, Distributed Systems
- **Thesis:** Evaluating Pretrained Vision Transformers Under Continual Learning.
- Selected for a competitive international master's program.

Sharda University **July 2023**

Bachelor of Technology - CSE with AI and ML

- **Relevant Coursework:** Operating Systems, Data Structures, Machine Learning, Databases, Cloud Computing
- **Thesis:** Virtual Generative Model Inducing Human Identity to Computers in Metaverse
- Awarded **merit-based scholarship** (Top 5–10% of cohort).

SKILLS

- **Programming :** Python, C++, SQL, Bash
- **Computer Vision :** Image Processing, Feature Extraction, OpenCV, CNNs, Vision Transformers, Image Classification, Visual Inspection, Defect Detection
- **Machine Learning :** Deep Learning, Model Evaluation, Feature Engineering, Transfer Learning, Continual Learning, Transformer Architectures
- **Frameworks & Libraries :** PyTorch, TensorFlow, Keras, OpenCV, Scikit-learn
- **Research & Mathematics :** Experimental Design, Scientific Literature Review, Performance Analysis, Scientific Writing, Linear Algebra, Optimization Fundamentals
- **Tools:** Git, GitHub, Linux, Docker, AWS

RESEARCH EXPERIENCE

Continual Learning for Computer Vision (Master's Thesis) Nov 2025

- Evaluated pretrained Vision Transformer architectures under Task-Incremental, Domain-Incremental, and Class-Incremental learning settings.
- Designed experimental pipelines for training, evaluation, and comparison of computer vision models across sequential tasks.
- Investigated catastrophic forgetting and knowledge retention in transformer-based visual learning systems.
- Conducted extensive review and analysis of state-of-the-art research literature in continual learning and computer vision.
- Documented experimental findings and identified research opportunities for future development of continual learning systems.

Machine Learning for Air Pollution [IEEE Publication] May 2023

- Published IEEE conference paper evaluating machine learning approaches for environmental prediction and monitoring.
- Analyzed Random Forest, SVM, Genetic Algorithm, LS-SVM, Decision Trees, and Artificial Neural Networks across multiple air quality datasets.
- Performed comparative evaluation of model performance and identified opportunities for future research and real-time monitoring applications.
- Presented scientific findings through structured research documentation and publication.

PROJECTS

Metal Defect Detection using Computer Vision

- Developed and evaluated computer vision models for automated metal surface defect detection using the NEU Metal Surface Defects dataset.
- Designed a comparative study of CNN, Support Vector Machine (SVM), and Random Forest approaches to analyze the effectiveness of deep learning versus traditional machine learning techniques for industrial inspection.
- Implemented image preprocessing, data augmentation, feature extraction, and model training pipelines using TensorFlow, Keras, NumPy, and Scikit-learn.
- Performed systematic model evaluation using accuracy metrics, confusion matrices, and class-level performance analysis across multiple defect categories.
- Investigated the applicability of computer vision techniques for automated visual inspection, defect classification, and quality-control systems in manufacturing environments.
- Investigated computer vision approaches relevant to defect classification and object detection tasks in industrial inspection settings.

DocDelta [Document Comparison API]

- Developed an NLP system using Sentence Transformers for semantic comparison and change detection in legal documents.
- Designed evaluation pipelines to identify added, removed, and modified content using embedding similarity techniques.
- Deployed solution using FastAPI, Docker, and AWS ECS Fargate.
- Implemented monitoring and performance analysis using AWS CloudWatch.

Lossy Text Compressor [Semantic NLP Pipeline]

- Investigated semantic text compression using transformer embeddings, quantization, and reconstruction techniques.
- Evaluated reconstruction quality using cosine similarity and ROUGE metrics.
- Analyzed trade-offs between compression efficiency and semantic preservation across multiple quantization levels.
