Dear Bain & Company Recruiting Team,

I am excited to apply for the AI/ML Associate position within Bain Capability Network's Sustainability CoE. I am currently pursuing an MSc in Computer Science at Sapienza University of Rome, specializing in Artificial Intelligence and Machine Learning, and I am passionate about building practical AI solutions that combine technical innovation with measurable business impact.

My academic and project experience has provided me with hands-on exposure to developing and evaluating machine learning models, working with structured and unstructured data, and building AI-driven applications. I have worked on computer vision and NLP-based projects involving model training, experimentation, performance evaluation, and optimization. These experiences strengthened my ability to transform complex problems into structured ML workflows involving data preprocessing, feature engineering, model selection, and validation.

I have also gained practical experience with Generative AI technologies, including transformer-based models, prompt engineering approaches, and integrating AI capabilities into applications using Python-based frameworks. Through projects involving AI workflows and application development, I have worked on connecting models with backend systems using tools such as FastAPI and Docker, enabling scalable and practical AI solutions.

What particularly attracts me to Bain is the opportunity to work at the intersection of AI, technology, and business transformation. The AI/ML Associate role aligns strongly with my interest in applying machine learning beyond experimentation — developing reliable solutions, evaluating model outputs, understanding limitations, and delivering tools that create real value for users and stakeholders.

Along with my technical skills in Python, machine learning frameworks, data analysis, and AI development, I bring strong problem-solving ability, adaptability, and a willingness to learn quickly in dynamic, collaborative environments. My experience working on interdisciplinary AI projects has helped me communicate technical ideas clearly and approach challenges with both analytical and practical thinking.

I would be excited to contribute to Bain's AI-driven initiatives and support the development of innovative solutions that help teams make better, data-driven decisions. Thank you for considering my application. I look forward to the opportunity to discuss how my background and skills align with this role.

Sincerely,

Swati Aggrawal
