Dear Hiring Manager,

I am excited to apply for the Research Intern, AI position at SHL. I recently completed my MSc in Computer Science with a specialization in Artificial Intelligence and Machine Learning from Sapienza University of Rome and am eager to contribute my research and technical skills to SHL's AI team.

My academic background has provided me with strong experience in machine learning, deep learning, natural language processing, and computer vision. As part of my master's thesis, I conducted research on continual learning for Vision Transformers, designing experimental pipelines to evaluate model robustness, catastrophic forgetting, and knowledge retention across sequential learning tasks. This work strengthened my ability to conduct rigorous experimentation, analyze model performance, and communicate research findings effectively.

I have also worked on AI-powered applications, including DocDelta, a document intelligence platform that uses transformer-based NLP models for semantic document analysis and comparison. Through this project, I developed backend APIs using FastAPI, integrated machine learning models into application workflows, and deployed scalable solutions using Docker and AWS. Additionally, my IEEE-published research on air pollution prediction involved evaluating multiple machine learning algorithms and performing comparative analysis across environmental datasets.

What particularly excites me about SHL is the opportunity to work on cutting-edge challenges spanning NLP, speech, computer vision, and generative AI. The role's focus on research, experimentation, and real-world AI applications aligns closely with my academic interests and long-term career goals. I am enthusiastic about contributing to innovative AI solutions while learning from experienced researchers and engineers.

Thank you for considering my application. I would welcome the opportunity to discuss how my background and passion for AI research can contribute to SHL's continued innovation.

Sincerely,

Swati Aggrawal
